Chapter 1

The Story of Mark

How a tiny robot became your best salesperson

Imagine you run a beautiful online store. You have great products, a nice website, and you are getting visitors. But there is a problem: most visitors leave without buying anything. They browse, they look around, and then... they are gone.

In a physical store, you would have a salesperson who greets customers, asks what they are looking for, shows them the right products, and answers their questions. But on a website? Nothing. Just a silent page and maybe a boring chat widget that nobody clicks.

That is where Mark comes in.

Mark is a tiny 3D robot who LIVES on your website. He is not a chatbox. He is not a popup. He is a little character that walks around your page, waves at visitors, and starts conversations. When someone clicks on him, he opens a beautiful chat window where visitors can type or even TALK with their voice.

Mark is powered by real AI. He reads your entire website, learns your products, your prices, your policies, and then uses that knowledge to help visitors. He never makes stuff up. He never offers discounts you did not approve. He is smart, helpful, and knows exactly when to suggest a product and when to just be friendly.

Mark was built by Arkin to solve one simple problem: e-commerce websites lose sales because they have no one to talk to visitors. Mark fixes that. He is your 24/7 AI salesperson who never sleeps, never gets tired, and never asks for a day off.

Chapter 2

What Mark Actually Does

Features explained in plain English

3D Robot Character

Mark is a fully 3D animated robot that appears on your website. He walks left and right, he waves when visitors arrive, and he jumps when he gets excited. He is designed to grab attention and make visitors curious enough to interact.

Smart Chat

When visitors click on Mark, a chat window opens. They can type questions and Mark answers instantly. He knows about your products, your pages, and your business because he has already read your entire website.

Voice Conversations

Visitors can press and hold the microphone button to talk to Mark with their voice. Mark understands what they say, thinks about the answer, and speaks back using a natural-sounding voice. It feels like talking to a real person.

Sales Intelligence

Mark is not just a helper. He is a salesperson. When a visitor shows interest in a product, Mark can suggest complementary items, handle objections like 'it is too expensive', and guide them towards making a purchase. You control how aggressive or gentle his sales approach is.

Website Knowledge (RAG)

RAG stands for 'Retrieval-Augmented Generation'. In simple words: Mark reads all your web pages and stores that information. When a visitor asks a question, Mark searches his memory first and only answers based on real data from YOUR site. He never invents products or prices.

Analytics Dashboard

Every conversation Mark has is logged. You can see what visitors asked, what Mark replied, which languages they spoke, and how many conversations happened today, this week, or all time. This data helps you understand what your visitors want.

Chapter 3

How to Install Mark

3 steps, 2 minutes, zero coding

1

Step 1: Install the Plugin

Go to your WordPress dashboard. Click Plugins, then Add New. Search for 'Mark AI' in the search bar. Click Install Now, then click Activate. That is it. Mark is now on your website.

2

Step 2: Get a Groq API Key (Free)

Mark's brain runs on Groq AI. Go to console.groq.com and create a free account. Copy your API key. Go to Mark AI settings in WordPress and paste the key. This powers Mark's ability to think and respond.

3

Step 3: Watch Mark Work

Visit your website. You will see a small 3D robot walking around at the bottom of the page. Click on him. Type a question about your website. Mark will answer using information from your actual pages. He is already trained on your site.

Zero configuration needed!

Mark auto-registers with the backend. No URLs, no secrets, no technical setup.

Chapter 4

The Settings Dashboard

Every button and toggle explained

General Settings

Groq API Key

Your AI brain key from console.groq.com. This is the ONLY thing you need to set up.

Widget Position

Where Mark appears: bottom-right (default) or bottom-left.

Auto Greet

Should Mark say hello automatically when someone visits? Default: Yes.

Primary Language

The language Mark speaks. Supports English, Urdu, Hindi, and more.

Accent Color

The color of Mark's chat window. Match it to your brand.

Store Settings

Store Name

Your business name. Mark uses this when talking about 'your store'.

Website URL

Your site URL. Mark uses this to know which pages to learn from.

Assistant Name

What the robot calls himself. Default: Mark. Change it to whatever you like.

Personality

Friendly, Professional, or Playful. Changes Mark's entire communication style.

Walking

Turn robot walking animation on or off. Off saves battery on mobile.

Sound Effects

Turn voice responses on or off. Off = text-only chat.

Chapter 5

Mark's 7-Layer Brain

How he thinks and why he never lies

Layer 1: Identity

Layer 2: Site Awareness

Layer 3: Personality

Layer 4: Conversational IQ

Layer 5: Anti-Hallucination

Layer 6: Sales Brain

Layer 7: Response Format

Mark is not who crash-landed on your website and decided to stay. This is not just flavor-text. It shapes HOW he responds. He speaks as a character, not a generic AI. He knows your website and what type of business you run. He says 'here at Cool Shoes Store' instead of 'I do not know what this website is'. He speaks about your site with pride. This changes Mark's tone, humor level, greeting style, and how formal he sounds. Professional Mark is precise. Playful Mark cracks jokes. Mark can offer investigation help, product info, general chat, or help with a problem. He tracks conversation stages: greeting, discovery, recommendation, objection handling, close. He knows your products, prices, policies, or deals. He only answers based on data he found on your actual website. If he does not know, he says 'I am not sure about that. let me redirect you.' Mark is not selling. Soft Sell (gentle suggestions), Active (proactive recommendations). Includes cross-sell, objection handling, urgency triggers, and lead capture. Mark speaks in 1-2 short sentences. No bullet lists. No paragraphs. No markdown. He talks like a real person because he IS a voice-first conversational interface.

Chapter 6

Sales Intelligence

How Mark helps sell without being pushy

Mark's sales brain is what makes him special. Unlike a regular chatbot that just answers questions, Mark actively helps visitors find the right products and guides them towards buying. But he does it smartly, not aggressively.

Three Sales Modes

Helpful Only

Mark only answers questions. He never suggests products on his own. Perfect for support-focused sites.

Soft Sell

When a visitor shows interest, Mark naturally mentions relevant products. One mention, no pressure. Like a friendly shop.

Active

Mark proactively recommends products with details and benefits. Still respects 'no'. Like an enthusiastic sales associate.

Smart Features

- Cross-sell: When someone asks about shoes, Mark suggests matching socks.
- Objection handling: 'Too expensive?' Mark reframes the value without offering discounts.
- Back-off rule: If a visitor says 'no thanks' twice, Mark stops suggesting entirely.
- Lead capture: Mark can ask for an email if a visitor shows strong buying interest.
- Golden rules: Mark NEVER offers discounts, quotes unconfirmed prices, or makes guarantees.

Chapter 7

Voice Chat

How Mark listens and speaks

Mark is not just a text chatbot. He can listen to your visitors' voice and speak back. This is powered by two technologies:

Speech-to-Text (Listening)

When a visitor holds the microphone button and speaks, their voice is sent to Groq's Whisper API which converts speech to text. Mark then processes the text like a normal message and responds. This works in multiple languages.

Text-to-Speech (Speaking)

Mark's voice is powered by Microsoft Edge TTS, which is completely FREE. No API key needed. The voice sounds natural and human-like. You can choose from male and female voices in multiple languages including English, Urdu, and Hindi.

Voice Settings You Can Control

Voice Type	Choose between different voice options for each language.
Speaking Speed	Make Mark talk faster or slower.
Pitch	Adjust how high or low Mark's voice sounds.
Sound Effects Toggle	Turn voice on or off entirely. When off, Mark is text-only.

Chapter 8

Analytics & Conversations

Track what visitors ask and what Mark says

Every conversation Mark has with your visitors is automatically saved. You can see all of this data in your WordPress dashboard under the Conversations tab.

What You Can See

- Total number of conversations (all time, this week, today)
- Number of unique visitors who chatted with Mark
- What language each conversation was in
- The last message the visitor sent
- What Mark replied
- Daily conversation charts to spot trends
- Peak hours when visitors chat the most

Why This Matters

This data is gold for your business. If 50 visitors ask about shipping but your shipping page is hard to find, now you know. If people keep asking about a product that is out of stock, now you know. Mark does not just sell. He gives you insights about what your visitors actually want.

Chapter 9

For Developers

Tech details for the curious

You do not need to read this chapter to use Mark. This is for developers or technically curious people who want to understand what is under the hood.

Frontend

Three.js for 3D rendering, GLTF robot model, vanilla JavaScript. No React or heavy frameworks. Scripts are deferred for performance.

Backend

Python FastAPI on Render. Handles AI chat, voice transcription, text-to-speech, and RAG search.

AI Model

Groq's Llama 3.3 70B for chat intelligence. Fast inference, high quality.

RAG Engine

Custom crawl engine using BeautifulSoup + TF-IDF vectorization with scikit-learn. Crawls up to 120 pages per site.

Voice

Groq Whisper for speech-to-text. Microsoft Edge TTS (free) for text-to-speech.

Database

WordPress uses MySQL via wpdb. Backend uses SQLite for zero-dependency deployment.

Security

Salted password hashing, per-store API tokens, rate limiting per endpoint, input sanitization, prompt injection blocking, URL validation against XSS.

Plugin Size

0.29 MB distributable. 3D model served via CDN or local fallback.

FAQ

Common questions answered

Is Mark free?

The Mark plugin is free. You need a free Groq API key to power the AI brain. Voice (Edge TTS) is also free.

Does Mark work on mobile?

Yes. Mark works on all devices. On mobile, walking animations can be reduced to save battery.

Can Mark speak languages other than English?

Yes. Mark supports multiple languages including Urdu, Hindi, Arabic, and more. He auto-detects the language visitors use.

Will Mark slow down my website?

No. Mark's plugin is only 0.29 MB. All scripts load with defer so they do not block your page from loading. The 3D model loads in the background.

Can Mark offer discounts?

No, and this is by design. Mark NEVER offers discounts, promo codes, or deals unless you specifically configure them. He will not make promises he cannot keep.

What if Mark does not know the answer?

He says so honestly. He will redirect the visitor to the right page or suggest contacting support. He never invents information.

Can I change Mark's personality?

Yes. Choose Friendly, Professional, or Playful. Each changes his tone, humor, and communication style completely.

How does Mark learn about my products?

Mark automatically crawls your website pages when you activate the plugin. He reads everything and stores it. You can trigger a re-crawl anytime from settings.
